Wise Submitted (27-FEB-2001) Sanger Centre, Hinxton, Cambridgeshire, CB10 18A, UK. E-mail enquiries: humquery@sanger.cuw Clone
requests: cloneraquest@sanger.ac.uk

On or before May 15, 2010 this sequence version replaced
g1:9958163, g1:12718064.

During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may note that the sequence submission corresponding to the overlapping clone, as we shuff sequence submission only a samal overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality) as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the chemistry or covered by high quality data (i.e., phred quality) as seembly, was confitmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em., EMEL; SW, SWISSPROT, Tr:, TREMEL; WP:, MORNDEP; Information on the WORNDEP database can be found at their source databases: Em., EMEL; SW, SWISSPROT; Tr:, TREMEL; WP:, MORNDEP; Information on the WORNDEP database can be found an chromosome 1, constructed by the Sanger Centre Chromosome 1 mapping Group. The invention relates to a variant dimethylarginine dimethylaminohydrolase-1 (DDAH 1; ADE71464) and a nucleic acid encoding it (ADE71463). DDAHs regulate the metabolism of ADMA (asymmetrical inchipator). DDAHs regulate the metabolism of ADMA (asymmetrical inchipator). DAHs regularly occurring nitric oxide synthase inhibitor) and nitric oxide, which are relevant in disorders such as cardiovascular disease and diabetes. The DDAH 1 gene is located on chromosome 1, which as been implicated in susceptibility to diseases such as familial combined hyperlipidaemia, premature coronary artery disease (CAD), non insulin-dependent (type 2) diabetes mellitus, and diastolic hypertension. The variant DDAH 1 of the invention has Met at position 87, rather than Thr. which is caused by a C to T change in exon 1.4t a position of the Thr874Met allele have an increased risk of developing cardiovascular diseases and diabetes. The invention also relates to a DDAH 1 cDNA capture probe; a method and kit for diagnosing a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               /standard_name= "Single nucleotide polymorphism (SNP)" /note= "Results in Thr (C variant) or Met (T variant) at position 87 of the protein"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New nucleic acid encoding a variant dimethylarginine diabetes, dimethylaminohydrolase-1 (DDAH-1) protein, useful for treating diabetes, and its vascular complications, e.g. coronary or cerebrovascular disease
                                                                                                                                                                                                                                                                              single nucleotide polymorphism; SNP; ADMA; asymmetrical dimethyl-arginine; nitric oxide; cardiovascular disease; coronary heart disease; cerebrovascular disease; hypertension; diabetes; susceptibility; genotyping; therapeutic targeting; antidiabetic; cardiant; cerebroprotective; hypotensive; gene therapy; gene; ds.

susceptibility to a cardiovascular disease and diabetes in an individual by determining the DDAH I genotype, a method of treating diabetes or vascular complications of diabetes by enhancing nitric oxide varialability, production or concentration, a method of targeting treatment of cardiovascular disease and diabetes in a hypertensive patient by determining the DDAH I genotype and treating them with a drug that affects nitric oxide availability, production or metabolism; and a transgenic animal which carries a human variant DDAH I nucleic acid sequence. The nucleic acid molecules and polypeptides are useful for treating cardiovascular disease (e.g., coronary heart disease, cerebrovascular disease, and hypertension), and diabetes and its vascular complications: The methods are useful for determining whether a patient vill benefit from treatment with a drug which affects nitric oxide availability or concentration, orn an agent which elevates DDAH availability or concentration, fund a proper applied a trisk of adverse effects if DDAH antagonists are administered. The present sequence effects if DDAH antagonists are mucleic acid encoding the "wild-type" (Thrist) DDAH I.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      120

These are useful in the diagnosis, treatment and screening of vascular diseases caused by arteriosclerosis, including heart failure, post-PTCA restenosis and ATGGCCGCCTCGGCCTTCGGCCTTCGGCCGCCACCCACGCCGTGGTGCTGCGGGCG 323 ATGGCCGGGCTCGGCCACCCCGCCGCCGCCGGCCGGCCACGCCACGCCGTGGGGGCG cracceaercecreeceaecacececreaeaaaececcaaeeceaeaaaacereerc χ. The invention relates to genes and their expression profiles are used for:

(a) screening modulators of precursor stem cell differentiation into esteoblasts, or bone tissue, deposition, (b) diagnosing abnormal costeoblasts, or bone tissue, abnormal rate of osteoblast formation or steoporosis; or (c) treating or monitoring treatment of the conditions cited in (b), or monitoring the progression of bone tissue deposition. Specific conditions include postmenopausal osteoporosis, glucocorticoid osteoporosis or male osteoporosis, osteopenia, osteodystrophy, druginduced abnormalities in bone formation or bone loss, conditions that involve altered bone metabolism (e.g. idiopathic juvenile osteoporosis), skeletal disease linked to breast cancer, mastocytosis, Fanconi syndrome or fibrous dysplasia. The present sequence is that of an osteoblast of differentiation associated cDNA marker of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the printed sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         382

The invention relates to a secretory polynuclectide (designated sptm)

Comprising any of 567 polynuclectide sequences (AB235837-AB26403), a

comprising any of 567 polynuclectide sequences a Least 90 % identical to

naturally occurring polynuclectide sequence at least 90 % identical to

the polynuclectide sequence, a polynuclectide complementary to them or an

EXA equivalent of them. The polynuclectide complementary to them or an

EXA equivalent of them. The polynuclectide are useful for

EXA equivalent of them. The polynuclectide are useful for

the expression of functional SPTM. These are particularly useful for

diagnosing, treating or preventing autoimmune/inflammatory disorders

(e.g. acquired immunodeficiency syndrome, anaemia, asthma or Crohn's

disease), neurological disorders (e.g. epilepsy, Huntington's disease,

dementia, stroke, Alzheimer's disease, Creutzfeldt-Jakob disease,

complicition sociences, and annesia), or cell proliferative disorders (e.g.

complicition or amnesia), or cell proliferative disorders (e.g.

psoriasis, polycythemia vera, or cancers including adenocarcinoma,

contemporation or prostate). Note: The sequence data for this patent did

cont form part of the printed specification, but was obtained in electronic

contemporation or the printed specification, but was obtained in electronic

contemporation or the printed specification, but was obtained in electronic

contemporation or the printed specification, but was obtained in electronic

contemporation or the printed specification, but was obtained in electronic New human secretory proteins and polynucleotides, useful for diagnosing, treating or preventing autoimmune/inflammatory disorders (e.g. AIDS), neurological disorders (e.g. Alzheimer's), or cell proliferations or Sequence 3932 BP; 1089 A; 883 C; 775 G; 1185 T; 0 U; 0 Other; Claim 1; SEQ ID NO 103; 458pp + Sequence Listing; English 2003-075543/07 P-PSDB; ABP75492

The invention relates to an isolated polypeptide comprising 12 fully defined sequences of 81.615 amino acids given in the specification; a naturally occurring amino acids squence at least 90% identical to, having 81.599 amino acids, at least 93% identical to a sequence of 529 amino acids, at least 93% identical to a sequence of 615 amino acids, all contains the polypeptide. The polypeptides and polymoleotides amino contains the polypeptide. The polypeptides and polymoleotides are useful in diagnosing, treating and preventing diseases or conditions associated with the decreased expression or overexpression of a drug metabolising enzyme (DME), such as autoimmune/inflammatory (e.g. AIDS, atherosclerosis, contact dermatitis) cell-proliferative (e.g. cancer, cirrhosis), developmental (e.g. dwarfism, hypothyroidism, endocrine (e.g. osseoporosis, thrombosis, dabetes), eye (e.g. glaucoma, correspondentis, materials, metabolic (e.g. dwarfism, hypothyroidism, endocrine (e.g. osseoporosis, thrombosis, dabetes), eye (e.g. glaucoma, correspondentis, metabolic (e.g. dwarfism, hypothyroidism, endocrine (e.g. osseoporosis, thrombosis, dabetes), eye (e.g. glaucoma, corrections, experience of disorders. These are also useful in assessing the effects of exogenous compounds on the expression of nucleic acid and amino acid sequences of DME. The DME or its fragments are useful in assessing corporating compounds for effectiveness as agonist or antagonist of the polymolectides of the properties, or in altering the expression of the traget polymolectides of the properties, and gene expression corrections, drug-target interactions, and gene expression corrections, drug-target interactions, and gene expression corrections, the polymolectides of the invention can be used in gene corrections, decreased the effects of the effects of the invention can be used in gene expression of the respective the effects of the expression of the effects of the effect
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           427
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        547

The invention relates to a variant dimethylarginine dimethylaminohydrolase. I DDAH 1; ADE71464) and a nucleic acid encoding it (ADE71463). DDAHS regulate the metabolism of ADMA (asymmetrical dimethylation). DDAHS regulate the metabolism of ADMA (asymmetrical dimethylation) and an actually occurring nitric oxide synthase inhibitor) and nitric oxide, which are relevant in disorders such as cardiovascular disease and diabetes. The DDAH 1 gene is located on chromosome 1, which has been implicated in susceptibility to diseases such as familial, which has been implicated in susceptibility to diseases such as familial, which has been implicated in susceptibility to disease such as familial, which is caused by a C to T change in exon 1 at a position or rhomosycous for the ThrEDMet allels have an increased risk of developing cardiovascular diseases and diabetes. The invention also corresponding to base 260 in ADE71463 and ADE71465. Individuals heterocorresponding to base 260 in ADE71463 and ADE71465. Individuals heterocorresponding to base 260 in ADE71463 and ADE71465. Individuals heterocorresponding to base 260 in ADE71463 and ADE71465. Individuals heterocorresponding to base 260 in ADE71463 and ADE71465. Individuals heterocorresponding to DDAH 1 cDNA capture probe; a method and kit for diagnosing assuceptibility to a cardiovascular disease and diabetes in an individual by determining the DDAH 1 genotype and treating diabetes or availability, production of concentration; a method of traceting them with a drug treatment of cardiovascular disease and diabetes in a hypertensive that affects nitric oxide availability, production or metabolism; and tabetes and its vascular cerebrocorscular disease, and hypertension or metabolism; and tabetes and publicates and polypeptides are useful for cerebrocorscular disease, and hypertension, and diabetes and publicate and patient will benefit from treatment with a drug which eleberate DDAH and gonish or metabolism; and diabetes and patient will benefit from treatment with a drug which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ô

The present invention describes a method for determining whether a compound induces a toxic effect on a tissue or cell. The method comprises preparing a gene expression profile of a tissue or cell sample exposed to the compound, and comparing the gene expression profile to a database comprising data or information on the Tox mean and non-Tox mean value. The method is useful for predicting or identifying at least one toxic effect, particularly hepatotoxicity, of a test or unknown compound. The genes listed in the specification are useful as diagnostic or toxicity markers for the prediction or identification of the physiological state of tissue or cell sample that has been exposed to a compound, or to identify or predict the toxic effects of a compound or an agent. These may also be used as markers for monitoring toxicity progression or for drug screening. The present sequence represents a primary rat hepatocyte toxicity modelling related gene sequence from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to nucleotide sequences which are useful the screening of compounds for the treatment of pain, or for the diagnosis of pain. The nucleotide sequences are up-regulated in the spinal cord in response to streptozocin-induced diabetes. The present sequence is one such nucleotide sequence.

Human; prostate cancer; ss; cDNA combination; differential expression; New combination comprising cDNAs that are differentially expressed in prostate cancer, useful for diagnosing, treating or monitoring the progression of treatment of prostate cancer. Claim 1; SEQ ID NO 328; 42pp; English. 29-MAY-2002; 2002US-00252157. 31-MAY-2001; 2001US-0295048P. Pearson CI; (FARI/) FARIS M. (PEAR/) PEARSON C I. WPI; 2003-831619/77. US2003190640-A1 Homo sapiens. 29-JAN-2004 09-OCT-2003 Faris M,

The invention relates to a combination comprising a number of cDNAs expressed in prostate cancer. The invention also relates to a method for detecting differential expression of one or more cDNAs in a sample containing nucleic acids by hybridising a substrate with the nucleic acids, thus forming one or more hybridisation complexes, detecting hybridisation complexes, detecting hybridisation complexes, formation and comparing the complexes formed with complexes formed with standard complexes, where differences between the standard and the sample complex formation indicate differential expression of cDNAs in the sample complex formation indicate differential expression of cDNAs in the sample. The differential expression is disgnostic of prostate cancer. The invention also relates to proteins and antibodies related to the cDNAs. The combination is useful for diagnosing, treating or monitoring the progression of treatment of prostate cancer. The antibodies are useful for detecting prostate cancer. This sequence represents a human prostate cancer cDNA of the invention.

Claim 1, Page 976-977; 2338pp; English.

AAF15566 to AAF16505 encode the human prostate cancer associated proteins, called prostate cancer antigens, given in AAB56363 to AAB57302. The prostate cancer antigens can have neuroprotective, cytostatic, cardioactive, immunomodulatory, muscular, vulnerary, gastrointestinal, nephrotropic, antiinfective, gynaecological and antibacterial activities,

and can be used in gene therapy. The prostate cancer antigen polynucleotides may be used for detection of prostate cancer, chromosome identification, as chromosome markers, and for numerous other diagnostic or research purposes. The prostate cancer antigens may be used to treat disorders such as neural, immune, muscular, reproductive, gastrointrestinal, pulmonary, cardiovascular, reproductive disorders, wounds, and infectious diseases. AAF16506 to AAF16514 to AAB57303 represent sequences used in the exemplification of the present 8888888888888888

New isolated nucleic acid molecules that are associated with ileitis, for preventing, treating, modulating and diagnosing ileitis in a mammalian subject

Claim 1; Page 212-213; 273pp; English

The invention relates to a novel isolated nucleic acid molecule comprising a polynucleotide having one of 90 polynucleotide sequences, given in the specification. The polynucleotides of the invention have antiinflammatory activity, and may have a use in gene therapy. The polynucleotide or a polypeptide encoded by it is used for preventing, treating, modulating or ameliorating a medical condition such as ileitis. The polypeptide or polynucleotide is also useful for manufacturing a medicament for treating ileitis. The sequence represents a condition as sequence tag obtained from a mouse clone by the TOGA (total gene expression analysis) method

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        88
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This invention describes novel polypeptides and their encoding nucleic acids derived from human pancreatic tumor tissue which have cytostatic activity. The sequences are also useful in producing pharmaceutical compositions for treatment of pancreatic tumors. AAE52858-E53014 represent expressed sequence tag (EGT) fragments derived from a human pancreatic tumor cDNA library and which encode the proteins represented

The present sequence is the human hydrolase protein-2 (HYDRL-2) encoding CDNA, identified in Incyte clone 949738, derived from the PANCNOTOS library. It is expressed in reproductive, gastrointestinal, nervous, and cardiovascular tissues. This sequence maps to chromosome 6 within the interval from 42.30 to 45.40 centimorgans (cM), to chromosome 9 within the interval from 130.40 to 166.50 cM, and to chromosome 9 within the interval from 81.00 to 92.60 cM. HYDRL antibodies, agonists and antagonists are useful for diagnosis, treatment and prevention of disorders associated with altered expression or activity of HYDRL. It includes cell proliferative disorder such as cancer, autolumune or inflammatory disorders such as inflammation, AIDS, neurological disorder such as epilepsy, stroke, renal disorder such as medullary sponge kidney, adrenal disorder such as adrenolated such as adrenolated sequences. The useful for detecting and quantifying gene expression in tissues
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     preventing cell proliferative, autoimmune and inflammatory, neurological, renal, adrenal and genetic disorders.

Analysis of the mouse transcriptome based on functional annotation Nature 420, 563-573 (2002)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               prepared by using trehalose thermo-activated reverse transcriptuse and subsequently enriched for full-length by cap-trapper. cDNA went through one round of normalization to Rot = 5.0 and subtraction to Rot = 25.0. Second strand cDNA was prepared with the primer adapter of sequence [5, GAGAGAGAGTTAATTAAATTAATCCCCCCCCCCCCC 3,]."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           /lab_mostal_Solar.
